DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 1-10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention. The newly added limitation of the elevated sections being polygons is considered to be new matter. i.e., the specification defines the elevated sections as crosses, hexagons or sliced hexagons, however as the limitation "polygon" encompasses a wider array of shapes than the disclosed shapes, this limitation is considered to be new matter.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Izushima. In regard to claim 1, Izushima discloses an elastomeric gripping element 28 (see Figure 4) configured to fit over a gripping section of an article wherein the gripping element comprises a textured outer surface28a2 and a plurality of elevated section 28a1 extending from the outer surface wherein the elevated sections are intercalated,

Art Unit: 3751

spaced apart shapes. Although the elevated sections shown in the embodiment in Figure 4 appear to be rings and not polygons, attention is directed to Figure 2 of the Izushima reference wherein three clusters of elevated sections are provided in order to enable a user to effectively place the fingers on the grip (column 3, lines 48-55). These elevated sections are polygonal in shape as they do not extend around the entire grip. Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to employ the gripping surface disclosed in Figure 4 in the form of three clusters in order to enable a user to effectively place the fingers. Such clusters would render the elevated areas polygons as they would no longer extend around the writing implement. In regard to claims 2 and 3, although the Izushima reference does not disclose the height of the elevated sections, it is the Examiner's position that it would have been obvious to one of ordinary skill in the art at the time the invention was made that the elevated sections can be designed to have any suitable height, including the claimed height, without effecting the overall operation of the device. Further, given the gripping element in the Izushima reference is for a writing instrument (as is the Applicant's), it appears that the claimed height of the elevated sections is well within the realm of obviousness to one of ordinary skill in the art. In regard to claims 4-8, the element is formed from a anti-slip, resilient thermoplastic elastomer (column 3, lines 15-16) having the claimed hardness (column 3, lines 22-24). In regard to claim 9, the elevated sections are spaced such that "small" particles will not become lodged therebetween and a particle which is large enough to become lodged can be "readily" dislodged. In regard to claim 10, the elevated sections have a smooth surface.

Art Unit: 3751

Response to Arguments

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground of rejection.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David J. Walczak whose telephone number is 703-308-0608. The examiner can normally be reached on Mon-Thurs, 6:30-5:00.

Art Unit: 3751

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Greg L. Huson can be reached on 703-308-2580. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
